Retriever

Use known information to find the people you're looking for

Join the dots between people, places, contact details (even mobiles and emails) using big data searching technology and deliver quick, accurate results.

Retriever removes the process of slowly searching across multiple systems, forms and locations and tightens up your approach. It will even spot data entry errors or name and address variations to help trace agents make more informed, reliable decisions – without leaving a credit search footprint on a consumer's credit report.

It has a unique single search entry box (just like a normal search engine). So it's easier for the trace agent to copy and paste the information they know into a single field. Then with just one search and one click Retriever returns results which are ranked and scored according to their similarities – making it more time – and cost-effective for your trace specialists to search for individuals.

Retriever

Retriever business benefits include:

Uplift in productivity. Our tool's unique single search entry box means quicker, more efficient search results.

Be empowered to quickly identify and analyse links between data points.

Retriever returns ranked and high probability results, not exact matches, so investigations are faster, smarter and more cost-effective.

Easy to use browser-based online access. No IT resource required.

Retriever search data includes:

→ Public data

→ Digitally captured data

→ Non-financial data

→ Bureau data

→ Address links

→ Aliases

→ Financial associates.

All of this information has been properly sourced for validation and tracing purposes

Isn't it time you found out what Retriever can do for your organisation?
